CERTIFICATIONS

- **Coursera:** Meta Front-End Developer

PROJECTS

- **Sand Filter Separator:** An automated sand filtering system integrated with IoT for remote monitoring, reducing manual labour by 40%. It provides real-time updates and enhances productivity and precision.

- **Weather App using Java:**
An Android application that displays live weather forecasts, including temperature, humidity, and precipitation. It features weather alerts and forecasts for multiple locations.

- **CGBook (Social Media Web Application):**
A social media web application built with PHP, allowing users to create profiles, share posts, send messages, and connect with friends. It features real-time notifications, group discussions, and a responsive design.

- **Employee Management System:**
A PHP-based application for managing employee records, tracking leave, and evaluating performance. It includes employee registration, department assignments, and attendance monitoring.

- **Reservation Nexus System:**
A PHP-driven platform for booking services like hotels, flights, and events. Users can browse options, make reservations, and receive email confirmations. The admin dashboard manages availability and customer inquiries.

- **Voting System:**
A secure PHP application for conducting online elections and surveys. It ensures voter anonymity and data integrity, allowing users to register, vote, and view results in real-time.
